

We provide assistance for international battery approval. Break through trade barriers and get certification under the IEC CB Scheme for your rechargeable cells and portable batteries according to the international safety standards IEC 62133, or for non-rechargeable cells and batteries, according to IEC 60086-4. You will then receive a CB Certificate and a CB Report that you can use to apply for the respective national certification mark at every accredited CB Testing Laboratory worldwide.

Obtaining the necessary international certifications for market access can be difficult, time consuming and expensive. The CB Scheme was created by the IECEE (International Electrotechnical Commission for Electrical Equipment ) to allow for faster and easier access to global markets.

It is a process of mutual recognition of test results among participating countries, usually without the need for further product assessment.

## Enter markets faster worldwide with the CB Scheme
